AI-Powered Interpretation and End-to-End Event Solutions at the AI Summit

2025-09-13 - Kiss Zsolt - Comments (0) - Web

At the AI Summit organized by Indaevents, we delivered real-time, AI-powered simultaneous interpretation across five parallel conference rooms. Each presentation was automatically transcribed and summarized in multiple languages, seamlessly integrated into the agenda items of our proprietary event application.

Thanks to this innovative service, the international audience experienced the diverse program without language barriers, while event organizers elevated the overall standard of their event with pioneering digital solutions.

Since 2020, our company has been developing and deploying advanced digital language technologies. Our portfolio includes linguistic support for scientific conferences, entertainment events, and high-profile political gatherings.

Discover our full range of digital language solutions tailored for international and multilingual events.

In addition, we provided comprehensive event technology support, including online registration, on-site access control, badge printing, digital signage for program displays, and food control through digital meal coupons—ensuring a seamless and fully digitized event experience.
